Modentic Industrial Corp.

Partner with Modentic, you have chosen the reliable company of the valve design and engineering, we guarantee the durability and consistent quality of our products, The manufacturing documentation are always provided very detailed to ensure the traceability and easy maintenance, you never have to worry about the products do not perform as expected. We want you to be a lifelong partner of our dedicated work team, and we welcome your feedback about our performance all the time, which is an important extra value for our company.

CONTENTS

Products support the needs of local & overseas users in more than 50 countries of the world. Based on the management philosophy of “Best Delivery, Service & Quality”. Modentic sets the pace to ensure customer’s satisfaction.

Range of Service:

We Offer Both Cast Ball Valves & Bar Material Ball Valves.

Metallic Materials of Construction

Available in both forged and cast pieces of stainless steel, all wetted metallic surfaces of clean ball valves are constructed from stainless steel, which are capable of withstanding the temperature, pressure, and chemical corrosiveness assuring the purity and integrity of the products. In addition to SS316L and CF3M; higher grade materials are available upon request, such as AL-6XN, Nickel Alloys, Stainless Steel Duplex.

• Low Ferrite Content

Because ferrite in process piping promotes roughing, especially in the weld, so users should always choose the equipment with low ferrite, Modentic controls metal parts with low ferrite content less than 3% or 1% upon request.

• Tube Connection Feature to Facilitate Automatic Orbital Welding

- ◆ ASME BPE compliant extended tube so that welding can be performed without valve disassembled, tangent lengths furnished to standard ASME/BPE table DT-4.
- ◆ Sulfur content on tube ends 0.005%~.0.017% to ensure consistent weldability. Chemical composition for automatic weld end furnished to ASME BPE-Part DT-3.

• Hygienic Clamp End In Accordance With US Dimensions

• Tube Bore Design

To minimize the pressure drops and to facilitate the drainability, the concept of uninterrupted flow tube bore feature is designed throughout the flow path tube bore feature is designed throughout the flow path including ball, seats and end connections.

• Seat & Seals

All nonmetallic material chosen are FDA 21 CFR 177/USP23 Class VI compliant-ASME/BPE SD-3.4.2; Design according to SD-3.6.1, SG-4.1.1.6, SG-4.1.1.8

*** Cavity filler seats are available upon request (not recommended for steam service)**

• Surface Finish

This is one of the major characteristic addressed to high purity equipment. ASME/BPE provide criteria of product contact surface finished for bioprocessing equipment the standard internal surface finish for Modentic high purity ball valves are mechanical polished to Ra20(0.5um), ASME/BPE SFV1; finer grade of surface treatment can be accomplished by electro-polished to achieve SF4 Ra15(0.38µm).

• Temperature Rating : -40°C~180°C (-40°F~356°F)

• Pressure Rating:

- ◆ 1/2" - 2" 1000PSI (PN63)
- ◆ 2 1/2" - 4" 720PSI (PN40)
- ◆ Steam Puressure of 150 Psig at 350°F

• Purge Port (upon the users' request)

For C.I.P. or S.I.P. application, valves have body and end piece bosses for ports.

Purge Port Type and Size are provided as per following

- ◆ Valve size 1 1/2" and less 1/4" female compression fitting
- ◆ Valve size 2" and upper 1/2" female compression fitting

• ISO 5211 Intergral Actuator Mounting Pad Design

• Packing

Modentic high purity ball valves are finally tested and packed in a clean environment. Each valves is protected with end caps, and sealed in a transparent plastic bag.

Benefits of Bar Machined Valves

- ◆ Lower Porosity and smoother Surfaces that can reduce surface contamination
- ◆ Stronger Corrosion Resistance

Benefits of Cast Valves

- ◆ Lower Cost
- ◆ Small batches of production acceptable

Automation Ball Valves

Modentic helps you to mount automation devices for your ball valves, include actuators, limit switch box; positioner.....for the need specific to the application.

•) Table Sf-5 Acceptance Criteria For Interior Surface Finishes of Valve Bodies

Anomaly of Indication	Acceptance Criteria
Cluster of pits	No more than 4 pits per each 1/2 in.x 1/2in. Inspection window. The cumulative total of all relevant pits shall not exceed 0.040in.
Demarcation	If <5% of the total area when visually inspected and Ra max. is met.
Dents	None accepted.
Grit lines	If Ra max. is met.
Nicks	If depth <0.010 in.
Pits	If diameter <0.020 in. and bottom is shiny. Pits <0.003 in. diameter are irrelevant and acceptable.
Porosity	If diameter <0.010 in. and bottom is shiny.
Scratched	If length <0.25in., depth<0.003in., and Ra max. is met.
Surface cracks	None accepted.
Surface inclusions	If Ra max. is met and there is no liquid penetrant indication.
Surface residuals	None accepted, visual inspection.
Surface roughness (Ra)	See Table SF-6.
Weld slag	None accepted.

Adupted from ASME/BPE-2005

•) Table Sf-6 RA Reading for Valves

Mechanically Polished [Note (1)]			
Surface Designation ASME BPE	Ra, Max.		
	µ-in.	µm	
SF1	20	0.51	
SF2	25	0.64	
SF3	30	0.76	

Mechanically Polished and Electropolished			
Surface Designation ASME BPE	Ra, Max.		
	µ-in.	µm	
SF4	15	0.38	
SF5	20	0.51	
SF6	25	0.64	

GENERAL NOTES:

- (a) All Ra reading are taken across the lay, wherever possible.
- (b) No Single Ra reading shall exceed the Ra max. value in this table.
- (c) Other Ra reading are avaiable if agreed upon between owner/suer and manufacturer, not to exceed values in this table.

NOTE:

(1) Or any other finishing methos that meets the Ra max.

•) Surface Roughness for Grit Finishes(Ra.)

Abrasive grit No.	µ-in.		µm	
	µ-in.	µm	µ-in.	µm
500	4 to 10	0.10 to 0.25		
320	6 to 15	0.15 to 0.38		
240	8 to 20	0.20 to 0.51		
180	25 max	0.64 max		
120	45 max	1.14 max		
60	140 max	3.56 max		

GRIT:

Measure the number of scarches per liner inch of abrasive pad. Higher numbers indicate a smoother finish.

RMS: Defined as Root Mean Square roughness, this method measure a smple for peaks and valleys. Lower number indicate a smoother finish.

Ra:Know as the Arithmetic Mean, this measurement represents the average value of all peaks and valleys. Lower numbers indicate a smooth finish.
